Chilled Beams are coming to Boston

270 Center St.—Unit F
Holbrook, MA 02343
Ph: 781-767-9555
Fax: 781-767-2447
E-mail: bluchner@nas-hvac.com

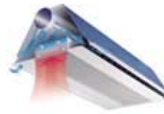

3 Lopez Road
Wilmington, MA 01887
Ph: 978-988-2000
Fx: 978-988-2200

10A Morse Drive
Essex Junction, VT 05452
Ph: 802-879-0442

Ken Loudermilk, of **TROX USA**, will be the main speaker at the January 11th Boston ASHRAE Chapter meeting. He will be presenting information regarding Chilled ceiling and Chilled beam technology. TROX offers several chilled ceiling technologies as well as Passive, Active and Multi-Service Chilled beams.

Passive beam

Active Beam

Multi-service Beam

TITUS offers 2 new diffusers

Critical Code Changes Require IAQ and Low-Leak Dampers

Two critical code changes have been recently implemented that affect control damper requirements and outside air management. The first (Section 403 of the International Mechanical Code) requires that constant ventilation requirements be maintained for all HVAC systems - including VAV systems. The second (International Energy Conservation Code, IECC) requires that outside air dampers have a leakage rating of 3 cfm/sqft or less - thus maintaining energy savings in a zone during unoccupied hours. **RUSKIN** has products that will help you measure and control outdoor air to meet either of these standards. **RUSKIN** has also introduced a louver with an integral air measuring capability to monitor air intake volume.

Did you know?

Charcoal in charcoal filters has a shelf life/useful life of about 3 years. Charcoal absorbs whether air is moving across the filter at high velocities or just sitting in the duct work. So after a period of time the charcoal will lose its effectiveness and should be replaced.
